EXPERIMENT NO 10

Frequently Asked Questions:

Q: What is UART?
ANS: A serial communication protocol used to send and receive data between devices.

Q: Why use circular buffer for UART?
ANS: It optimizes space and allows continuous data flow without memory shifting.

Q: What happens when buffer is full?
ANS: New data is lost or should be managed until space is available.

Q: Is UART synchronous or asynchronous?
ANS: UART is asynchronous communication.

Q: What is baud rate?
ANS: The speed of data transfer, measured in bits per second (bps).
